Energy use calculation

* Your energy usage is calculated from your gas consumption using a standard industry formula:

Unit consumed (cubic metres)
× Volume correction (for temperature & pressure)
× Calorific value (energy in each m³ of gas)
÷ 3.6 (convert from joules)

For you:

$143.1950 \times 1.02264 \times 39.7^{\dagger} \div 3.6 = 1613.3$

[†] Average calorific value shown to one decimal place
